## REMARKS

Claims 128-138 are pending. The specification has been amended to incorporate the sequence listing submitted herewith. No new matter has been added. Attached hereto is a marked-up version of the changes made to the claims by the current amendment. The attached page is entitled **“Version with Markings to Show Changes Made.”**

The foregoing constitutes a complete response. Applicants submit that this

Example 2

Formation of Triple Helix Structures Using  
Oligomers (ON) Containing 5-Propynyl Uracil  
Residues that Bind to Duplex DNA

Three oligomers were synthesized as follows:

ON-1 5'TC'TC'TC'TC'TC'TTTTT 3' (SEQ ID NO: 1)

ON-2 5'TC'TC'TC'TC'TC'U\*U\*U\*U\*U\* 3' (SEQ ID NO:2)

ON-3 5' TC'TC'TC'U\*C'U\*C'U\*U\*U\*U\* 3' (SEQ ID NO:3)

Each oligomer (ON) was hybridized with duplex DNA containing the target sequence 5' AGAGAGAGAGAAAAA 3' (SEQ ID NO:4). Hybridization was carried out in 140 mM KCl, 5 mM MgCl<sub>2</sub>, 5 mM Na<sub>2</sub>HPO<sub>4</sub>, pH 6.6. Thermal stability, T<sub>m</sub>, of the resulting triple helix formed between each oligomer and the target sequence was determined. The following T<sub>m</sub> values were obtained, ON-1 (control oligomer) was 42.1 °C, ON-2 was 48.1 °C and ON-3 was 55 °C. The increased T<sub>m</sub> values of ON-2 and ON-3 were not expected and demonstrated that the triple helix formed was more stable than the corresponding control triple helix structure.

Example 3Binding of Oligomers Containing 5-PropynylUracil or 5-Propynyl CytosineTo Single-Stranded RNA

Oligomers were synthesized as follows:

ON-1 5'TC'TC'TC'TC'TC'TTTTT 3' (SEQ ID NO: 1)

ON-3 5' TC'TC'TC'U\*C'U\*C'U\*U\*U\*U\* 3' (SEQ ID NO:3)

ON-4 5' TC\*TC\*TC\*TC\*TC\*TTTTT 3' (SEQ ID NO: 5)

2. On page 83, please delete the paragraphs (lines 1 through 24) and replace with the following amended paragraph:

The oligomers were hybridized with a single-stranded target RNA sequence, 5' AAAAAGAGAGAGAGA 3' (SEQ ID NO:6), in 140 mM KCl, 5 mM MgCl<sub>2</sub>, 5 mM Na<sub>2</sub>HPO<sub>4</sub>, pH 6.6. The following T<sub>m</sub> values for the duplexes were obtained; ON-1 (control) was 65.5 °C, ON-3 was 74.0 °C and ON-4 was 73.0 °C. Duplexes formed with ON-3 and ON-4 were more stable than the control oligomer. Surprisingly, ON-3 and ON-4 gave increased T<sub>m</sub> values which demonstrated that the duplex formed was more stable than the corresponding control duplex structure.

Example 4Formation of Triple Helix Structures at Elevated pH

Triple helix formation at elevated pH was demonstrated using ON-1 as a control and ON-5, 5' U\*C'U\*C'U\*C'U\*C'U\*C'U\*U\*U\*U\*U\* 3' (SEQ ID NO:7). Oligomers were hybridized with duplex target DNA, as described in Example 2 except that the buffer was at pH 7.4. T<sub>m</sub> values of the triple helix were then determined. ON-1 had a T<sub>m</sub> of 27.1 while ON-5 had a T<sub>m</sub> of 51.5. Thus, oligomers containing 5-propynyl uracil were capable of triplex formation at high pH levels, while the control oligomer formed triplex structure only at temperatures that are below physiological.

3. On page 84, please delete the paragraph (lines 26 through 34) and replace with the following amended paragraph:

ON-1 5'TC'TC'TC'TC'TC'TTTTT 3' (SEQ ID NO: 1)

ON-6 5' TC'TC'TC'U'C'U'CU'TU'TU' 3' (SEQ ID NO: 8)

ON-7 5' TC'TC'TC'TC'TC'U'U'U'U'U' 3' (SEQ ID NO:9)

Base residues designated U' correspond to 5-(3-methyl-1-butynyl)uracil. The oligomers were hybridized with duplex DNA containing the target sequence, 5' AGAGAGAGAGAAAAA 3' (SEQ ID NO:4).
